

Church Building Update

3-9-2020

The architectural drawings and specifications are complete and have been submitted to the City of Lynnwood for permits. We expect this process to take four to six weeks. In the meantime, we have presented design contracts to both the electrical and HVAC subcontractors. They are working on design and engineering drawings, which once approved, will be submitted to the City of Lynnwood on a deferred submittal basis. Once the permits are approved construction should start about two weeks later.

While we are waiting for the permits, we are working with the architect to refine the plans to meet our needs and budget. We are also beginning to look at fixtures and furniture.

We have updated renderings and drawings which will be posted online and, in the Narthex, as soon as a location is identified. These renderings are conceptual and some of the detail is likely to change as we progress with the final version. These are designed to give a general idea of what the church will look like when it is completed.

We will be using the bulletin as well as the Church web site for the official communication on the status of the church remodel project. There may also be pulpit announcements and town hall meetings for updates but the primary means will be written updates in the bulletin or inserts in the bulletin. Any other updates you may get or hear may not be as up to date or as accurate as what will be in the bulletin or the church website. As we reach certain events, like receiving permits, or milestones those will be communicated to the church community.

Please watch the bulletin for future announcements and updates.
